

Five Planetary Centres: Tokyo

Today, I want to share with you about Tokyo as one of Five Planetary Centers. The city has a personality Ray on the Fourth Ray, and the soul is the Sixth Ray. Although the Tibetan does not clearly write of the rays of Japan, the ray of personality seems to be the Sixth Ray, and Japan represents the more dense form of the material force known as Maya.

When I was first offered the opportunity to share some thoughts with the Triangles group, the pandemic disruption was not so serious as it is now. Now it spread quickly around the world, causing a universal problem of Humanity as a whole. As you may know, the origin of the virus was in Wuhan, China, but the outbreak on the Cruise-Ship that stayed in Japan, unfortunately, contributed to the mass-spread of infections that occurred in February. I regard this spread from the cruise ship as playing the same role in this crisis as the Fukushima nuclear power plant played in spreading the invisible substance, nuclear radiation.

In other words, I feel that Japan has a role in attracting attention by taking on the issues that the world should take seriously, such as the Atomic bomb that ended the Second World War. The depth of these seemingly accidental events, I believe represent the sixth ray influence, which is self-sacrifice that I see conditioning this country.

Japan is supposed to be the host country for the 2020 Olympics. Japanese citizens are now naturally wondering if we will still commit to organizing this big event under this present chaos? In other words, this situation leads many people to ask, "When does this turmoil end?" But at the present moment nobody knows the answer. Of course, Japan cannot cancel the Olympics Games, but at least one-year postponement will be the best solution. If it cancels, the Japanese economy will break down, so the Prime Minister still says, "We will hold it on schedule." The sacred torch has already arrived in Japan. It seems nobody can stop this plan, which includes mass economic marketing that has been underway for many years.

The Japanese government's response to this pandemic is clearly "less-economical damage." The reason why the number of infected people seems to be small is the difficulties of getting an inspection. As a result, the infection appears to be under control, and the daily behavior is not restricted, so there is less significant economic damage so that we can host the Olympic Games this summer. However, wise citizens know there are so many infected people in the town and this does not bode well for the immediate future.

But I do not want to criticize the Japanese government here, but what is the role that Tokyo and Japan play in the world in this moment of crisis? That is the essential question. Japan, where the number of hidden people infected by the virus continues to increase, seems to have, in its essence, many similarities to the situation that arose during the World War, wherein many citizens were forced to fight and sacrifice themselves for god, without any resources or weapons. And, again, this situation could be a reflection of the strong sixth ray influence controlling in Tokyo.

The fourth ray, harmony through conflict is surely active now when Japan is in the middle of a conflict related to the Olympic Games, Coronavirus, and the economic crisis. One unfortunate thing that is manifesting today is that many citizens are not taking serious action towards this pandemic, because there are not yet many people who have been infected. This situation is precisely the same as when we started the world war, trusting blindly that "we would win the victory. Because Japan is the powerful country of Gods", so many people were forced to live under the distortion of the idea of self-sacrifice.

The difference between now and the past is that the New Age of Aquarius has started. This is the age of the soul. We are evolving little by little towards a better direction. At least the "war" is no longer happening. This pandemic is not a "war killing between humans and humans," but rather represents a type of purification of "anxiety and anger" controlling so strongly so many people at this time. It is making us all reflect upon the structure of our society.

"Wakachiai-Sharing" is the spirit of "wa-Harmony" that Japanese people have valued from olden days. At the time of the Great East Japan Earthquake, the citizens who were affected by the disaster shared small supplies in the community. Many volunteers went out to support them. And I am still grateful for the support and prayers that went out for us from around the world. May this pandemic chaos be the evolution and initiation of consciousness of our planet, Earth. By keeping distance at the level of the body does not create any distance in our ability to share love and wisdom.

Thank you and blessing from Tokyo.

Reiko Nakanishi
